Salle de cours du LVA - INSA de Lyon
25 bis Avenue Jean Capelle, 69621 VILLEURBANNE

Characteristic features of typical inverse geophysical and especially seismological problems will be outlined, together with procedures and methods used. Aspects common to both seismology and other branches will be accented. An example of inverting real seismological data by means of seismic tomography will be presented. The goal of the presentation is to address topics related to solving inverse problems common to different scientific fields.
